1. A factory for field-interception radar is located in a triangle bordered by Kerepesi ut, Fehér utca, and Terebesi utca in the Cavalry Training Area (Lovassági Gyakorlótér) in the Köbánya (10th) District of Budapest. The factory area is 325 by 500 m. and it is heavily guarded.

2. The factory produces one field-radar set per day. The completed sets are mounted on trucks manufactured by the Csepel Automobile Factory. These trucks are similar to vehicles carrying transmitters. A sort of a rectangular box, measuring approximately 2 x 1.5 x 0.4 m., is mounted on the top of each vehicle. This box is believed to contain the folded radar antenna during movement or when not in use. Such a truck observed outside the factory area had also a two-wheel trailer attached to it which resembled a one-ton tow truck for carrying a generator. After the radar aerials are mounted on the trucks, the latter are parked in the northeast corner of the courtyard of the factory. Usually, some 10-15 trucks can be seen. The equipped trucks are sent in convoys of two or three to a military depot located in Timot utca, Budapest IX.
